

## About The RenovoData Backup Solution

We give PEACE OF MIND to our trucking and transportation customers. Allowing them to focus on their daily operations.

Our DEDICATION to Customer Service sets us apart from simple cloud-based online computer and server backup companies.

If I had to sum up my experience with RenovoData, I would say that their service level is **OUTSTANDING.**

The process is **SIMPLE, SEAMLESS & RELIABLE.** Like many trucking companies, we have limited resources and can't cover every eventuality, but I did need reliability. What I get with RenovoData is peace of mind.

McKimm Transit, MN**

## McKimm Transit - The Back Story.

McKimm Transit hire an outside company to provide their IT needs, not having the capacity or time to perform this in-house. Their IT company set up an image-based backup solution.

Unfortunately when they most needed the service, they discovered that the backup was taking so long it was not completing. There hadn't been a successful backup for months. It was very frustrating.

“ McLeod recommended we try RenovoData. We initially tried them with no strings attached, at no cost. We have now been using them for 9 months. We had our first full backup completed within 2 days and then every night the incremental backups take place. RenovoData set up bandwidth throttling so that the backups barely affect remote staff when they connect to our network.

”

## The Solution

RenovoData was able to overcome McKimm Transit's limited bandwidth challenges getting all data backed up over the internet using our data de-duplication, compression, and bandwidth throttling tools. Not only does the backup routine complete every night, remote users can login and work at night while the backups are running. This was not possible with their old backup solution.
